

Preparing Zimbabwe's workforce *for the age of AI.*

ZimAI Ready is a web platform that tells employees how AI affects their job, teaches them the skills that matter for their profession, and certifies them — while giving employers a clear, data-driven view of how AI-ready their organisation is and where to invest in reskilling.

The problem we *solve*

Everyone is told to "learn AI", but most professionals and organisations have no way to answer the basic questions:

- How exposed is my role to AI — and am I prepared?
- Which AI skills matter in my profession, and what should I learn first?
- Should I upskill in my role or reskill for a new one?
- How can I prove I can use AI responsibly at work?
- For employers: which teams are ready, and where should training money go?

How it works — *five steps, one pathway*

01

Assess

A 2-minute, 9-question check-in on role, sector, tasks, AI use and confidence.

02

Discover

Personal AI Readiness score, role AI-exposure, and a prioritised AI Skills Prescription.

03

Learn

Personalised micro-lessons for 11 professional domains, with quick checks and an AI Tutor.

04

Practise

Realistic workplace scenarios scored by AI against a transparent rubric.

05

Certify

Knowledge test + capstone earn AI Aware, Capable or Ready — publicly verifiable, renewed yearly.

For employees

- Clean dashboard: one next step and four key numbers
- Career-transition analysis (e.g. clerk → data analyst)
- AI Tutor that knows the learner's role and progress
- Shareable skills profile and QR-verifiable certificates

For employers

- Workforce readiness verdict by department
- AI exposure vs readiness and skills-gap analysis
- Organisational AI maturity score and competencies
- AI Workforce Advisor recommending where to invest

How it's built

- React 19 + TypeScript + Vite, Tailwind design system
- Google Gemini for assessment, tutoring and feedback
- Firebase: Google sign-in and Cloud Firestore with security rules
- Deployed on Google AI Studio; offline demo mode included
